Dilemmas in Urogynaecology

Course objectives

- Demonstrate live surgery of advanced laparoscopic and vaginal surgery for recurrent prolapse, incontinence and pelvic floor disorders
- Share techniques and “tricks of the trade” with peers and colleagues
- Accelerate the learning curve in laparoscopic and vaginal techniques
- Discuss management of complex cases, complications
- Discuss and amalgamate the breadth of experience of the faculty and attending delegates

Who should attend

Consultants and Senior Trainees who already have a degree of experience in laparoscopic surgery, benign vaginal surgery and/or Urogynaecology. This course benefits those who want to learn, improve and share their experience in the field of pelvic floor reconstruction and laparoscopic suspension techniques.

Some of the topics for discussion

Recurrent prolapse

Laparoscopic sacrocolpopexy
 Sacrospinous fixation
 Choice of operation
 Preoperative investigations
 Choice of mesh
 Role of vaginal mesh today
 Combined colorectal / pelvic floor pathology
 MDT
 Role of MR proctography
 Laparoscopic ventral mesh rectopexy after failed previous vaginal mesh
 Specialist commissioning
 What to do when all surgery fails: role of plastic surgery

Recurrent Incontinence

What to do when primary surgery fails
 Preoperative assessment
 Intractable OAB
 Voiding difficulties
 Managing mesh complications
 Artificial urinary sphincter

Thursday 6th & Friday 7th
 February 2014
 The ARK
 Conference Centre
 Dinwoodie Drive,
 Basingstoke
 Hampshire, RG24 9NN
